

# Save money and the environment with your new all electric home

**New all-electric homes are cheaper to heat, cool and run – and can save households over **\$2,200 per year** on their energy bills when combined with solar panels.**

New all-electric homes don't need two separate systems for heating and cooling - instead using one, efficient system.

New all-electric homes can use highly efficient heat pumps for their hot water, which are cheaper to run and can be timed to soak up solar power. And they can also use modern, induction cooktops - which are safer, faster and easier to clean than gas cooktops.

New all-electric homes don't need to cost any more upfront than new homes connected to mains gas and mains electricity, and can often cost less.

This is why the Victorian Government, as part of its Gas Substitution Roadmap, has chosen to phase out gas connections to new homes – to ensure Victorians can benefit from low cost, healthy and comfortable new homes.

Building a new home is also the best time to consider higher energy efficiency for the building. Building to 7 Stars and above will further reduce heating and cooling energy use and save even more money on energy bills and emissions.

Victorian households are able to take advantage of rebates and interest free loans available through the Solar Homes Program to reduce the cost of installing

solar on their new home. Victorians can start saving from the day they move in and can further increase their savings by consuming the energy generated by their system each day.

The Gas Substitution Roadmap is helping our State navigate the path to net zero emissions while cutting energy bills.

**Please see next page for examples of cost savings.**

## Example:

### Costs of a new all-electric home (with multi-split heating/cooling) vs a new dual-fuel home

#### All-electric:

#### Appliance and install costs

Cooling	\$12.1k
Heating	
Hot water	\$4.5k
Cooktop (inc. fixed charge)	\$1.8k
<b>Total (appliances)</b>	<b>\$18.4k</b>

#### Bill savings

Heating/Cooling	\$480 saving
Hot water	\$170 saving
Cooktop (inc. fixed charge)	\$370 saving
<b>Total savings</b>	<b>\$1,020 saving</b>
<b>Annual energy bill</b>	<b>\$2,590</b>

#### Solar

Solar installation cost (6.6 kW)	\$4,630
Solar saving	\$1,230 saving
<b>Annual energy bill (with solar)</b>	<b>\$1,360</b>

#### Dual-fuel:

#### Appliance and install costs

Cooling	\$12.4k
Heating	
Hot water	\$2.4k
Cooktop (inc. fixed charge)	\$1.2k
<b>Total</b>	<b>\$16k</b>
Gas pipework installation cost	\$1.3k to \$5k
<b>Total cost (appliance + installation)</b>	<b>\$17.3k to \$21k</b>

#### Bill costs

Electricity bill	\$1,880
Gas bill	\$1,730
<b>Annual energy bill</b>	<b>\$3,610</b>

We acknowledge Victorian Traditional Owners and their Elders past and present as the original custodians of Victoria's land and waters and commit to genuinely partnering with them and Victoria's Aboriginal community to progress their aspirations.
